SUMMARY

AI-focused Software Engineer with hands-on experience designing scalable backend systems and distributed architectures, with strong emphasis on systems thinking, observability, and research-informed development.

SKILLS

Languages: Python, Java, JavaScript, Go
Backend: FastAPI, Flask, Django, Express.js, Node.js, REST APIs, Microservices
AI/ML: LLMs, Agentic AI, Workflow Automation, Vector Databases, Model Evaluation
Frontend: React.js, Next.js, Vue.js
Databases: MySQL, PostgreSQL, Oracle SQL, MongoDB, Redis, Firebase, ClickHouse, Prometheus
Cloud: AWS, Azure, Oracle Cloud (OCI)
DevOps: Git, Docker, Kubernetes, CI/CD, Linux, Nginx
Blockchain: Hyperledger Fabric, Polkadot SDK, Smart Contracts

EXPERIENCE

Associate Consultant | ORACLE Aug 2025 – present

- Completed structured enablement and **Oracle Health Insurance (OHI) product training** across Java, Oracle SQL, Groovy, JUnit, and frontend technologies, including **hands-on labs and implementation tasks** to understand **insurance domain workflows** (policies, claims, billing) and enterprise testing practices.
- Earned **5+ Oracle certifications** (OCI Foundations, OCI AI, OCI GenAI) and completed supplementary **Coursera and LinkedIn Learning coursework**, strengthening proficiency in **cloud, AI, data platforms**, and OHI system fundamentals.

Software Developer | Codifinary Technologies Jun 2025 – Aug 2025

- Owned multiple POCs end-to-end, from solution research and design documentation to backend implementation, frontend integration, and production deployment. Worked with QA and test engineers to resolve bugs, maintain and improve the deployments.
- Implemented OpenTelemetry-based observability pipelines using SkyWalking agents and transformers, enabling centralized metrics, traces, and logs across multiple applications, and built metric forecasting and anomaly detection using log short-term memory and Kafka-based buckets.
- Represented the company at client engagements, leading requirement gathering, technical pitching, deployments, and developer training during on-site visits.

Software Developer Intern | Vizares Dec 2024 – Jun 2025

- As part of the core founding staff, led development of 8+ observability features and dashboards using Go, Vue.js, OpenTelemetry, eBPF, and node agents, enabling real-time telemetry visualization.
- Built and integrated core platform modules (End User Monitoring, executive dashboards, traces, custom dashboards, instances, applications) using Prometheus, ClickHouse, and PostgreSQL, and implemented Docker-based microservices for high-throughput telemetry ingestion and scalable deployments.
- Mentored 2 interns to ship windows exporter feature end to end deployment, contributed to technical interviews, and delivered production features under tight deadlines with emphasis on security and reliability.

Software Developer Intern | ContentEaseAI May 2023 – Nov 2023

- Owned end-to-end development of a core feature for an AI-powered Chrome extension using Vue.js, FastAPI, and AWS, enabling web data scraping and content summarization from static and dynamic websites.
- Optimized 10k+ token summarization using MapReduce, reducing processing time from 30–60s to <10s, and improved latency through Redis caching.
- Implemented authentication, authorization, RBAC, payment integration, and session management independently within 2 weeks.

PROJECTS

AIDA (Adaptive Intelligent Data Abstraction) — Research-Driven Data Analytics & Visualization Platform
Ongoing research project; publication in progress

- Designed and built a **semantic, schema-aware analytics system** that translates natural-language business queries into **validated analytical queries and interactive visualizations**, reducing ad-hoc dashboard creation time by **~60–70%** compared to manual BI workflows.
- Architected a **multi-stage intent → validation → compilation pipeline**, separating semantic understanding from execution and achieving **>90% query validity** on unseen queries with **sub-second query planning latency**.
- Implemented a **backend-agnostic analytics architecture**, enabling extensibility across relational, NoSQL, and unstructured data sources while focusing on latency, accuracy, and cost-efficient inference.

MetaCognitive — Research-Driven Productivity & Planning Assistant

- Designed and developed **metacognitive planning system** enabling structured goal decomposition, auditable task histories, and adaptive execution, resulting in an estimated **~30% improvement in task completion consistency**.
- Built a **decision and reflection framework** capturing intent, execution context, and outcomes, improving planning accuracy, prioritization clarity, and post-hoc traceability across short- and long-horizon goals including daily tasks featuring a performance tracking metric.
- Defined a forward-looking research roadmap incorporating **procedural and episodic memory models, efficient retrieval-augmented reasoning, and neuro-symbolic, empathetically trained decision layers** to further enhance long-term adaptation, personalization, and cognitive alignment.

EDUCATION

B.E in Computer Science & Engineering
B N M Institute of Technology • Bengaluru, KA, IN • 2021 – 2025

CERTIFICATIONS

IBM Full Stack Software Developer Professional Certificate
Microsoft Certified: Azure AI Fundamentals
IBM AI Software development
Oracle Certified: OCI Foundations, OCI AI foundations, OCI Gen AI Professional
