SUMMARY

Results-oriented software developer passionate about continuous learning and applying emerging technologies. Equipped with a strong understanding of software development principles, I excel at delivering innovative solutions that drive impactful results.

EXPERIENCE

Associate Consultant

Aug 2025- present

ORACLE – Hybrid - OTH, Bangalore

- Completed intensive training in Java, OracleSQL, Groovy, JUnit, and front-end development, establishing a robust foundation for enterprise software development and testing.
- Earned certifications in Oracle Cloud Infrastructure (OCI), OCI AI, Generative AI, Vector Databases, Agentic AI and RAG systems, showcasing expertise in cloud and AI-driven solutions.
- Engaged in Oracle product training, understanding and preparing to deliver client-focused solutions using cloud and AI technologies.

Software Developer

Jun 2025 – Aug 2025

Codifinary Technologies – Remote (Contract)

- Took ownership of **multiple POCs** and researching the best possible solution for any feature and **implemented it end to end** from documenting the **approach, approval, design, backend logic and frontend integration till deployment** of the feature.
- Helped the team in **collecting and storing valuable metrics, traces and logs from opentelemetry** for multiple applications, helped in implementing **skywalking agent and transformer** for generic solution that would work for any application.
- Took initiative in **individually representing the company at multiple client sites** and business travelling for understanding the **client requirements, pitching, requirement gathering, and deployment, and training.**

Software Developer Intern

Jun 2025 – Aug 2025

Vizares - Manyata Tech Park, Bengaluru, India

- Led **end-to-end development** of key features for an **observability platform** using **Go, Vue.js, OpenTelemetry, and eBPF, node agents and exporters**, enabling real-time telemetry data collection and visualization using real time timeseries and other charts.
- Developed end-to-end implementations and integrations for **EUM, Executive Dashboard, Traces, Custom Dashboard, Instances, Applications and further mroe with eBPF and Prometheus ,Clickhouse, Postgre** to enhance system monitoring and event tracing.
- Participated in the interview taking process and mentored other fellow interns and led the team in building features and entire screens throughout the software development life cycle ensuring quality and efficient output bound to tight deadlines
- Implemented Docker-based microservices for scalable data processing, ensuring **seamless observability and efficient metric storage.**

Software Developer Intern

Jun 2025 – Aug 2025

ContentEaseAI - TEMPE, AZ, USA

- **Led the team** and took ownership of **end-to-end development** of a key feature for an AI-powered Chrome extension using **Vue.js, FastAPI, and AWS**, enabling interactive website **data scraping and content summarization.**
- **Optimized** summarization speed for 10k+ token content using **MapReduce**, reducing processing time from **30-60s to <10s.**
- **Improved performance** with **Redis caching**, minimizing redundant processing and accelerating response times.
- Implemented authentication, authorization, role based access, payment integration and session management in **2 weeks single handedly.**
- **Pair Programmed** important features and functionalities delivering at short period of time at crucial times ensuring quality and testing.

SKILLS

Programming Languages: Python (Advanced), Java, JavaScript, C/C++

Backend Frameworks: FastAPI, Flask, Django, Express.js, Node.js, Golang, Java, Groovy, Junit

Frontend & Full-Stack: React js, Next.js, Vue.js, Nuxt js

AI & Automation: ML Models, LLMs, GenAI, Agentic AI Systems, Workflow Automation, Python AI Frameworks

Databases: MySQL, PostgreSQL, Oracle SQL, MongoDB, DynamoDB, Firebase, ClickHouse, Prometheus

Cloud Platforms: AWS, Azure, Oracle Cloud

DevOps & Tools: Git, Docker, Kubernetes, CI/CD, Linux, REST APIs, Nginx

Blockchain: Hyperledger Fabric, Ethereum/Solidity (learning), Polkadot SDK, ZKP, Smart Contracts

EDUCATION

B.E in Computer Science

B N M Institute of Technology • Bengaluru, KA, IN • 2021 - 2025

PROJECTS

Phishing Website Classification

B N M Institute of Technology • github.com/gshyam46/URL-alert

- Achieved **97.4% classification accuracy** using the Gradient Boosting Classifier, with a **15% improvement** over baseline models through focused feature engineering and EDA, leveraging scikit-learn, XGBoost, and CatBoost, **improving accuracy by 30%** and **reducing execution time by 20%** through hyperparameter tuning.

AI Assistant with Face Recognition and Emotion Detection

B N M Institute of Technology • github.com/gshyam46/Nova

- Achieved **85% emotion detection accuracy** using OpenCV and TensorFlow, improving adaptability to diverse conditions and boosting response speed by 20%, with integration of text-to-speech and vice versa for quality user engagement.

E Commerce Platform

B N M Institute of Technology • github.com/gshyam46/amazonClone

- Implemented **user authentication** using **Firebase and NextAuth.js**, achieving seamless session management and enhancing user retention by **25%** through optimized login workflows, containerized using **docker** and deployed the application in **vercel**.
- Leveraged **Stripe API** for payment integration, enabling secure transactions and using **Firestore DB** for storing and retrieving orders.
- Developed a responsive UI with **Next.js, TailwindCSS**, and Redux for state management, improving page load speeds by **30%** and ensuring a consistent cross-platform user experience.

Private Blockchain based communication Platform

Final Year Capstone Project • github.com/gshyam46/fabric-chain

- Designed and implemented a private, permissioned blockchain using Hyperledger Fabric, enabling secure user onboarding with wallet integration (e.g., MetaMask) and private communication for a single organization, with plans for multi-organization expansion and a digital goods marketplace.
- Utilized Docker for containerization and deployed the application on Ubuntu, ensuring scalability and streamlined development workflows, improving deployment efficiency by 20%.
- Architected a responsive client application with Next.ts and Node, integrated with Hyperledger Fabric for auditable document sharing, reducing transaction processing time by 15% and enhancing data integrity.

Skill Based Projects

- **Node & React JS** – Interactive Todo Application
- **React Native** – Movie Tracker Application
- **Django & PostgreSQL** – Credit Approval System
- **MERN** – Plants E-commerce Website

CERTIFICATIONS

IBM Full Stack Software Developer Professional Certificate

Harvard Square Leaders Excellence, soft and intercommunication skills

Microsoft Certified: Azure AI Fundamentals

IBM Web Development and Cybersecurity

IBM AI Software development

Oracle Certified: OCI Foundations, OCI AI foundations, OCI Gen AI Professional, Oracle Apex

LinkedIn Certified: Agentic AI, Gen AI, RAG systems, LLM Fine tuning, Workflow automations, Java, Groovy,etc
